

INNOVATIVE PRODUCTS
DESIGNED BY RELIABILITY EXPERTS

-  CNC machined top and bottom surfaces
-  Thread protection
-  Push/pull tensioning system
-  Sandblasted and powder coated
-  Permanent replacement part
-  Reduced maintenance

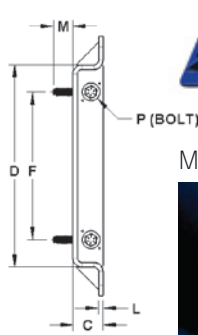

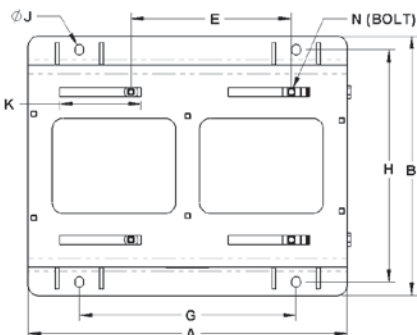

Merckell's double adjusting motor bases are made with thicker 50W steel and their upper and lower faces are CNC-surfaced.

These features eliminate the assembly's angular support leg and help increase the motor and equipment's useful life compared to other motor bases.

Protecting the threads with Goralon bellows prevents the tensioning screws from getting grimy and rusty, allowing the tension to be adjusted at all times.

The carriage bolts that affix the back part of the motor are supported by a plate to facilitate installation.
